

**INTERPHEX CHINA
SUZHOU INTERNATIONAL EXPO CENTER 5 – 7 NOVEMBER 2008**

Extract Technology exhibited at Interphex China for the first time in November 2008. The show was very successful and they received new enquiries from previous clients and new companies alike.

Whilst in China Mike Davies (Sales and Marketing Manager) and Tony Rhodes (Sales Manager) also visited a number of companies that already have Extract Technology containment equipment installed as well as new companies to present their complete product range.

The visit also allowed Extract to link in with Carinate International Corp., a company with offices in Shanghai (China) and Taiwan who will now be representing Extract Technology in these regions from 2009 onwards.

Mike Davies and Tony Rhodes also took this opportunity to provide comprehensive product training on Extract's range of products to the Sales Team. Their first success has been to secure a Purchase Order for Dispensing Booths from a US based company who are building a generic medicines factory in Taiwan during 2009.

Mike Davies of Extract Technology said, " *China has always been a successful marketplace for our innovative product range, which is designed to offer optimal product protection when handling potent compounds. There is huge potential in this region, and we felt that the time was right to have a local partner. Carinate are very experienced in this market and we look forward to a long and successful partnership.* "
