

**NEWS RELEASE
DECEMBER 2008**

**MULTI NATIONAL PHARMACEUTICAL COMPANY FROM VENEZUELA
VISIT EXTRACT TECHNOLOGY**

Extract Technology were recently approached by a pharmaceutical company in Venezuela for a new Downflow Booth following a successful installation many years ago at the same site. This new project involved an upgrade of the existing facility and subsequently Extract received a purchase order for a Pharmair Dispensing Booth.

The Client visited Extract Technology in Huddersfield to witness the Factory Acceptance Test along with learning more about the expanding range of dust containment equipment currently designed and manufactured at the Extract Huddersfield facility.

Accompanying the Client was the Extract agent from Venezuela, Benito Faccini of Clean Air Products, who was able to ensure that his client's expectations were met, at the same time he was able to undertake additional product training.

Following on from the visit, the Project Head of the site in Venezuela praised Extract Technology's commitment and achievement throughout the whole project and said, "I am sure that you go beyond other companies in the same industry, with your expertise, knowledge and commitment to your worldwide customers. You fully understand your customer's requirements and have the outstanding ability to achieve success in your business"

Extract Technology manufactures Downflow Booths, Isolators and Pack-Off Systems for the pharmaceutical industry.
